

Update on FERC Order 881 Compliance (RSC-2018-54A)

Reliability Subcommittee (RSC)

January 13, 2026

Purpose

Provide an update on MISO's FERC Order 881 compliance program

Key Takeaways

- MISO now expects real-time systems will be ready by end of Q2 2026 but still has software vendor delivery risk
- With the delay of the new Look Ahead Commit (LAC) market clearing engine until mid-2026, MISO does not expect forward market systems to be ready before Q1 2028
- Partial compliance is not expected in 2026 however MISO is on track for full compliance by December 2028

MISO Expects Core Systems Will Be Ready in 2026

Further delays are possible depending upon MISO software vendor delivery timelines (dashed boxes).

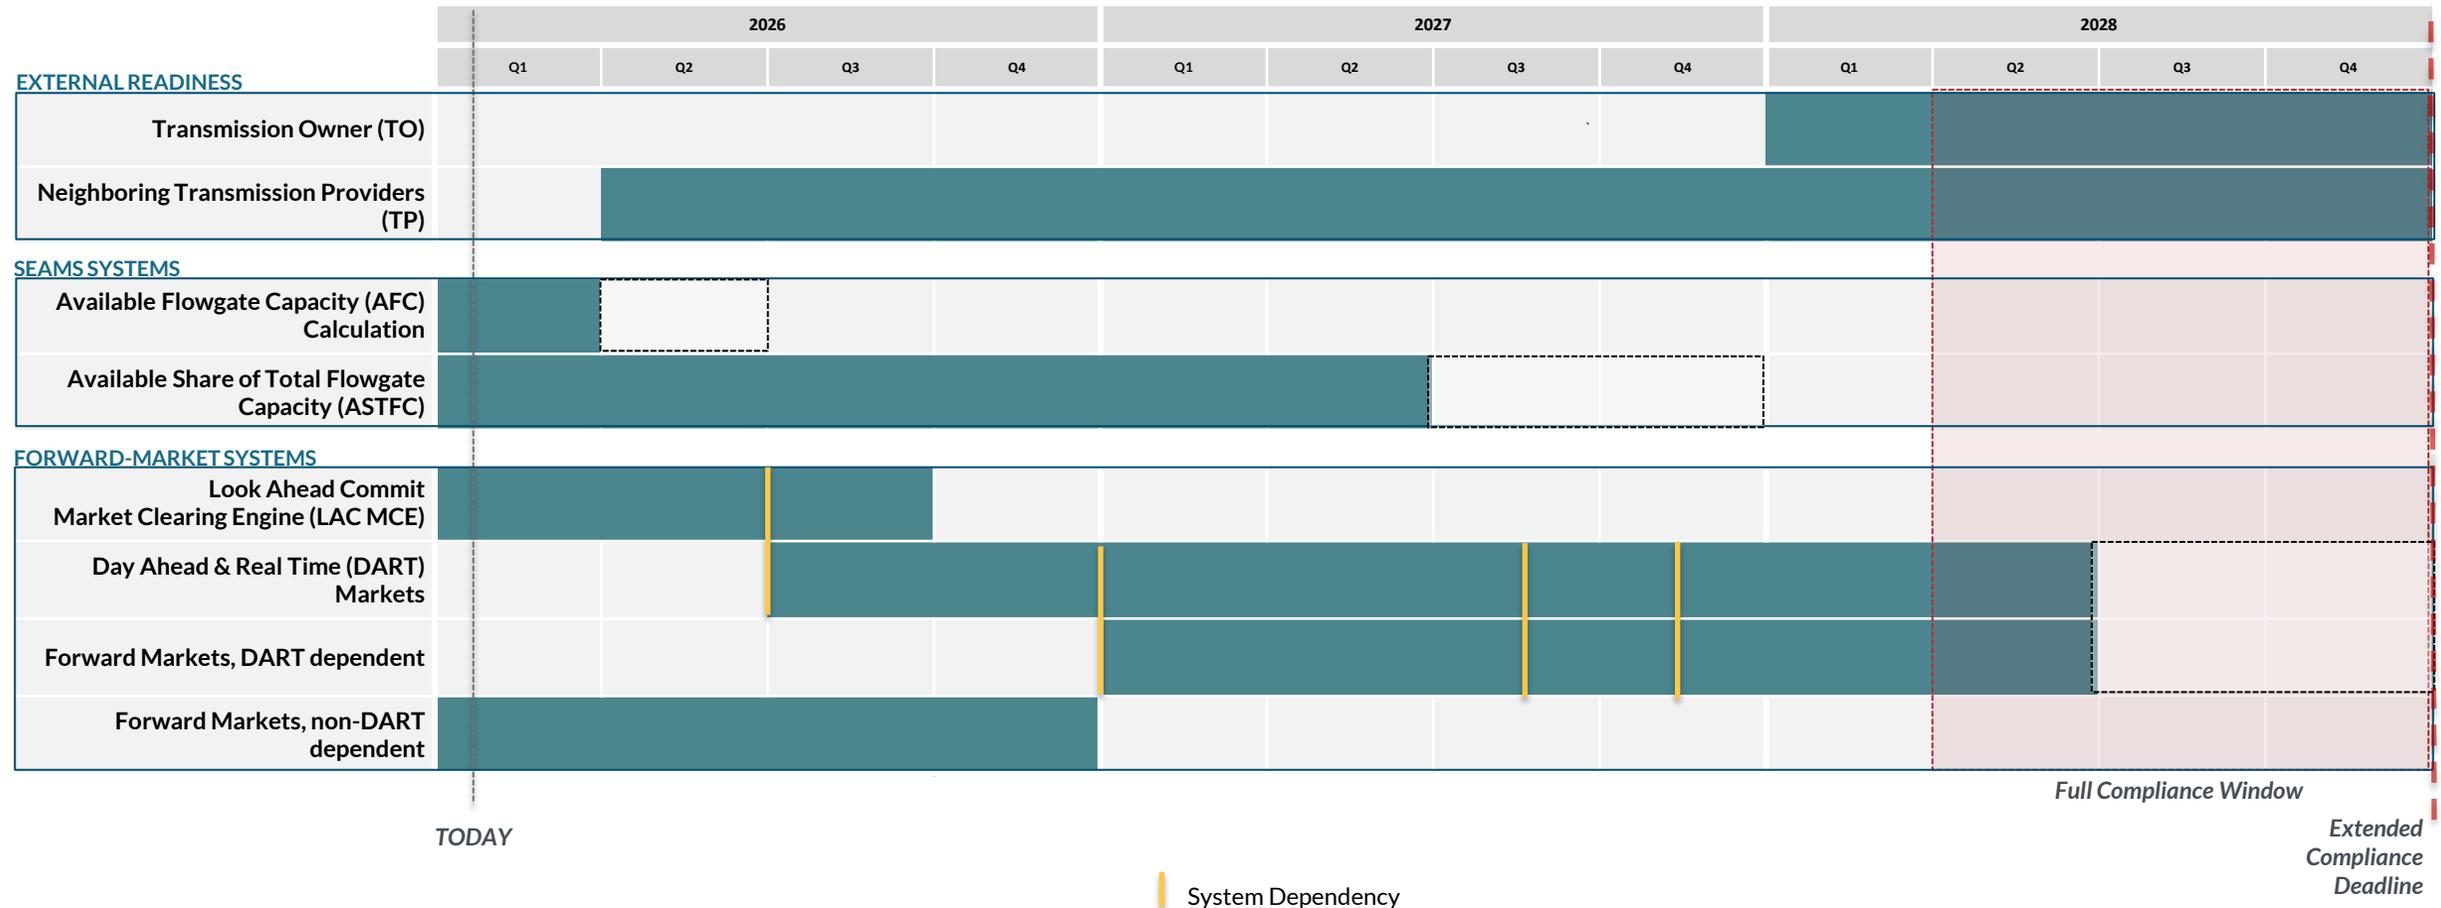

TO readiness activities are expected into 2027. MISO does not expect a partial compliance filing in 2026.

MISO Expects Full Order 881 Compliance in 2028

MISO expects forward market and seams systems will be ready by Q2 2028.

MISO expects incremental TO integration activities will be minimal.

Next Steps

- Monthly Order 881 coordination workshops continue in 2026
 - 3rd Friday of the month (except for June which is 2nd Friday)
 - Next meeting is this Friday January 16th
 - These are closed workshops. Appropriate Non-Disclosure Agreements (NDA) must be on file to participate
- The next TO Readiness Survey will go out later this month
- MISO's yearly update to FERC on compliance status is due in June
