

Order No. 2222 – What DER Aggregation Use Cases Will It Unlock?

Jeff Dennis, General Counsel and Managing Director

Prusha Hasan, Policy Associate

Advanced Energy Economy

About Advanced Energy Economy (AEE)

- AEE is a national association of businesses that are making the energy we use secure, clean, and affordable.
- AEE is the only industry association in the United States that represents the full range of advanced energy technologies and services, both grid-scale and distributed. Advanced energy includes energy efficiency, demand response, energy storage, wind, solar, hydro, nuclear, electric vehicles, and more.
- AEE also supports the work of the Advanced Energy Buyers Group ("AEBG"), a coalition of large buyers of advanced energy technologies to meet sustainability goals.
- AEE pursues policy transformation in the states and in wholesale power markets that expand market opportunities for advanced energy technologies and lay the foundation for a 100 percent clean advanced energy future.

Benefits of Increased DER Participation in Wholesale Markets

Directly from Order 2222:

- ✓ Enhanced resilience to infrastructure threats (e.g., weather) through reliance on local DERs
- ✓ Improved competition and lower wholesale rates, benefitting all ratepayers
- ✓ Additional supply of services vital for cost-effective decarbonization
- ✓ Unlocking new revenue streams, lowering costs for developers and customers

Future Opportunities with Increased Collaboration:

- ✓ Increased visibility of DERs for transmission and distribution grid operators
- ✓ Enhanced resilience to infrastructure threats (e.g., weather) through reliance on local DERs
- ✓ Accelerated achievement of state policy goals

DERs Are an Important Part of MISO's Energy Future

- Cumulative distributed energy resource capacity in the United States is projected to grow to 387 gigawatts by 2025
- Order No. 2222 gives us the opportunity to make the most of the region's investment in DERs
- AEE report illuminates the near-term use cases that DER aggregators expect to pursue under Order No. 2222 and offers solutions to overcome barriers to participation

FERC ORDER NO. 2222: WHAT DER AGGREGATION USE CASES WILL IT UNLOCK?

Order No. 2222 unleashes the power of distributed energy technologies — Here is how aggregators and developers plan to bring DERs to wholesale energy markets to create a more reliable and flexible grid

June 2021

General Recommendations to Guide RTO Compliance Efforts

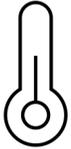

- **Recommendation 1:** *RTOs/ISOs should create market rules that maximize the participation of DERs. The goal of stakeholder processes in RTOs/ISOs should be to create pathways that allow full participation of aggregated DERs in all wholesale markets*
- **Recommendation 2:** *RTOs/ISOs should ensure that a range of business models and technologies can participate*
- **Recommendation 3:** *Grid operators should seek to harmonize retail and wholesale use cases*
- **Recommendation 4:** *While implementation dates will depend on a number of factors, RTOs/ISOs should not unduly delay timely implementation of FERC's final rule.*

What DER Aggregations Will Order 2222 Unlock?

Frequently Dispatched DERs, e.g., Electric Buses, Battery storage

Residential Demand Response, e.g., Smart Thermostats and Water Heaters

Residential Behind-the-Meter (BTM) Resources, e.g., Solar, Solar + Storage, Storage, and EV Charging

Front-of-the-Meter (FTM) Distribution-Connected Resources

This is a non-exhaustive list intended to help illuminate considerations that must be taken into account to accommodate a range of DERs.

Order 2222 in Action: Frequently Dispatched DERs, e.g., Electric School Buses

A growing number of school districts are replacing fossil fuel school buses with electric models which are rarely used at night or during the summer

During these times, these resources can become a flexible resource that can provide many grid services

There are currently **480,000** school buses serving more than **25 million** students

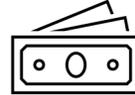

Other examples of frequently dispatched DERs include residential EVSE, energy storage, and workplace charging

The Opportunity and Barriers: Frequently Dispatched DERs, e.g., Electric School Buses

Potential Retail Services:

- Transportation/Electric Vehicle Charging
- Demand Response
- Peak Load Shaving
- Non-Wires Solutions Via Distribution Utility

Potential Wholesale Services:

- Energy
- Capacity
- Ancillary Services

To enable wholesale market participation, grid operators will need to:

- Develop a continuous participation model that gives these resources credit for their full capacity value
- Allow these DERs to update energy offers in real-time to account for retail uses
- Allow submetering and/or create properly designed “baselines” to avoid baseline erosion due to frequent dispatch and give these resource fair compensation

Next Steps

- AEE plans to publish use cases report in June 2021
- Engagement with states in MISO region to discuss use cases and opportunities for customers
- Review of MISO proposals with use cases as a lens to examine whether they allow DER aggregations to fully participate

FERC ORDER NO. 2222: WHAT DER AGGREGATION USE CASES WILL IT UNLOCK?

Order No. 2222 unleashes the power of distributed energy technologies — Here is how aggregators and developers plan to bring DERs to wholesale energy markets to create a more reliable and flexible grid

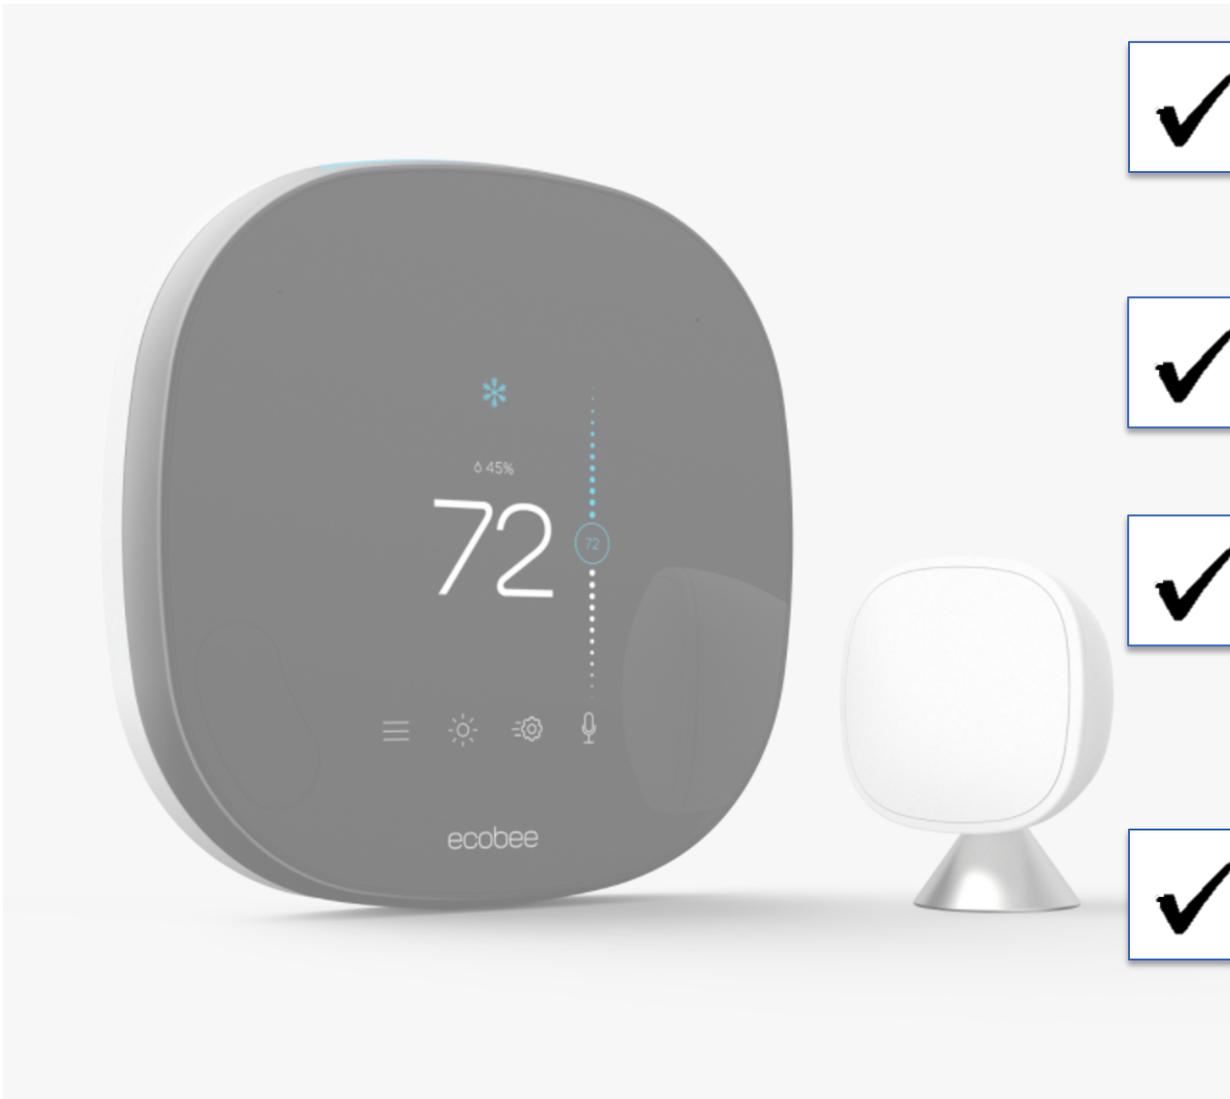

June 2021

Appendix

Order 2222 in Action: Residential Demand Response (DR), e.g., Smart Thermostats

Order 2222 allows residential customers and their homes to play a part in the power grid also

Residential devices such as smart thermostats and connected water heaters control the largest loads in homes

Enabling wholesale market participation for smart thermostats alone has the potential to contribute **40 GW** of load reductions through residential customers

These DERs provide grid operators with reliability benefits and delivers cost savings to consumers while improving local resiliency and help meet state climate goals

The Opportunity and Barriers: Residential Demand Response, e.g., Smart Thermostats

Potential Retail Services:

- Enhanced Home Comfort and Cost Savings
- Energy Efficiency and Demand Response
- Peak Load Shaving, Load Shifting and Load Smoothing

Potential Wholesale Services:

- Energy
- Capacity
- Ancillary Services
- Reverse Demand Response

To avoid data access barriers and open up wholesale markets to these resources, grid operators should:

- Allow direct metering (or “submetering”) of residential DR resources
- Ensure that metering and telemetry requirements are based on data quality needs that provide the RTO/ISO with necessary, actionable information tailored to the services being provided
- Put procedures in place to avoid charging customers twice for the same energy if residential DERs are dispatched to both increase and reduce load

Order 2222 in Action: Residential Behind-the-Meter, Solar + Storage, Storage, and EV Charging

DER aggregators will be seeking to bid customer-sited resources such as batteries, rooftop solar panels, and smart loads (e.g., EV chargers) into wholesale markets

There is widespread interest in a transition to an electrified economy from consumers, states, and policymakers

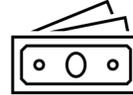

These DERs provide grid operators with reliability benefits and delivers cost savings to consumers while improving local resiliency and help meet state climate goals

The Opportunity and Barriers: Residential Behind-the-Meter, Solar + Storage, Storage, and EV Charging

Potential Retail Services:

- Customer Bill Management
- Peak Load Shaving
- On-Site Backup Generation
- Renewable Energy Credits (RECs)

Potential Wholesale Services:

- Energy
- Capacity
- Ancillary Services
- Demand Response and Reverse Demand Response

To open up wholesale markets to these DERs, grid operators should:

- Create a participation option for smaller DERs that allows for sub-metering
- Limit the data and telemetry required for these small, sub-metered resources to what is actionable given the market services the resource is providing
- Ensure flexibility so that providers have the ability to design and bid in different configurations (e.g., different hybrid solar+storage resources)

Order 2222 in Action: Front-of-the-Meter (FTM) Distribution-Connected Resources, e.g., Community Solar

Deployment of FTM distribution-connected resources has surged in recent years

States, municipalities, and local governments are interested in the expansion of larger DERs (such as community solar that is either standalone or paired with storage).

However, bulk power grid operators and distribution utilities have struggled to take full advantage of these unique resources.

The Opportunity and Barriers: Front-of-the-Meter (FTM) Distribution-Connected Resources

Potential Retail Services:

- Peak Load Shaving
- Net Metering
- Renewable Energy Credits (RECs)

Potential Wholesale Services:

- Energy
- Capacity
- Ancillary Services

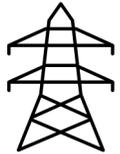

To open up wholesale markets to these DERs, grid operators should:

- Avoid maximum size requirements that exclude FTM eligibility in DERAs and ensure that FTM resources are eligible to provide the same products and services at the same rates as non-aggregated FTM DERs.
- Work with stakeholders to provide an opportunity for these resources to participate in the market with state-jurisdictional interconnection agreements (even when connected to a dual-use feeder). The translation of these rules into RTO-specific processes and models will be critical to their success.

Benefits of Aggregated DER Participation

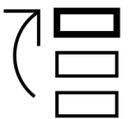

Benefits for All: If grid operators and other actors work to remove these barriers, participation by these DERs can create benefits for all participants in the electricity sector:

Wholesale market operators gain the ability to utilize these assets to meet the needs of the larger grid

Distribution utilities gain local resilience on the distribution grid

DER aggregators are provided a new revenue stream, helping them make DERs and new services available to more customers

Consumers benefit from cost savings passed on by DER aggregators while also receiving a desired service

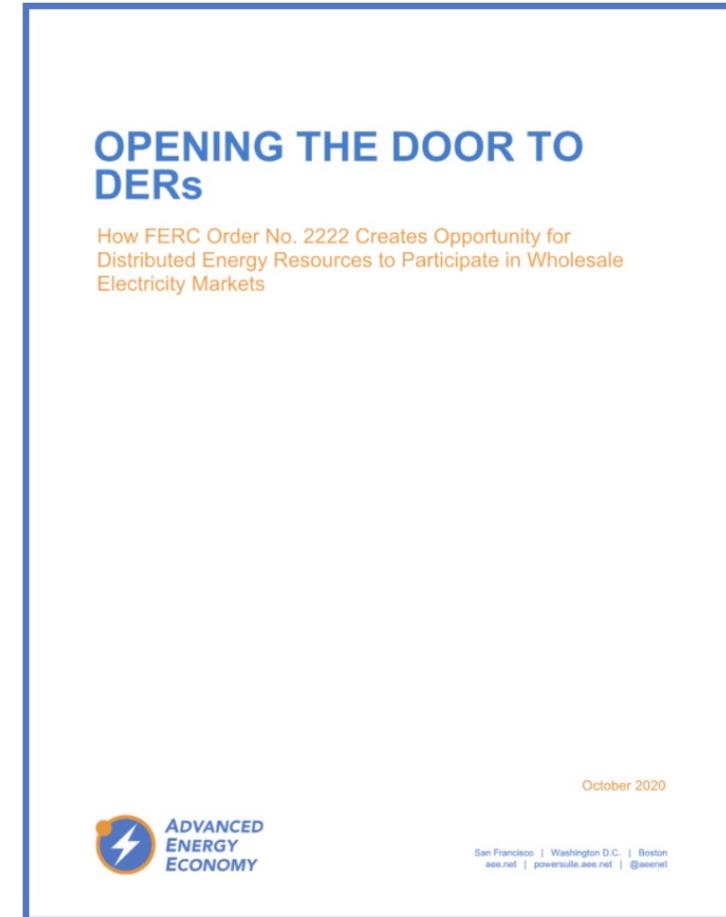

October AEE policy brief explains Order No. 2222

Opening the Door to DERs

*How FERC Order No. 2222
Creates Opportunity for
Distributed Energy Resources
to Participate in Wholesale
Electricity Markets*
