Real-Time Pricing Report

Generation Fuel Mix

Historical Generation Fuel Mix

Daily Regional Forecast and Actual Load

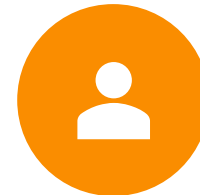

Historical Regional Forecast and Actual Load

Historical NSI

Historical Daily Forecast and Actual Load
by Local Resource Zone

MISO Data Exchange

- MISO has historically offered reports containing analysis and status of market operations. These reports, available on the MISO website, are produced in various formats for users to download and reformat.
- The MISO Data Exchange provides data contained in the website reports via Application Programming Interfaces (API) to improve the method and format of this data delivery.
- The MISO Data Exchange allows stakeholders to access high-quality data in one place, on demand, in a user-friendly format.

MISO Data Exchange

- **Benefits**
 - APIs provided use modern standards and best practices and are available on demand.
 - Enables a more consistent methodology for users to reliably get the data they need.
- **What is changing**
 - The Data Exchange currently includes APIs for Pricing and Load, Generation & Interchange (LGI) information.
 - Beginning September 30, 2026, the Pricing and LGI market reports will no longer be updated. Existing reports will remain available on the public website until the end of their retention period.
 - Instead of accessing the data found in those market reports through the public website, users should obtain the data through the Data Exchange, which provides users with an endpoint from which to collect and consume data in the way that best serves them.

MISO Data Exchange

- Create an account in the [Data Exchange](#)
 - A MISO website account is required to create a Data Exchange account. If you do not have an account on the MISO website, refer to the steps in [this Knowledge Article](#) to create one.
